Theories* Crown  
Science and Faith  
Can—and Do—Support  
Each Other Science  
and Christianity are  
often presented as  
opposites, when in fact  
the order of the  
universe and the  
complexity of life  
powerfully testify to  
intelligent design. With

this comprehensive  
resource that includes  
the latest research,  
you'll witness how the  
findings of scientists  
provide compelling  
reasons to  
acknowledge the mind  
and presence of a  
creator. Featuring  
more than 45 entries  
by top-caliber experts,  
you'll better  
understand... how  
scientific concepts like  
intelligent design are  
supported by evidence

the scientific findings that support the history and accounts found in the Bible the biases that lead to scientific information being presented as a challenge—rather than a complement—to Christianity Whether you’re looking for answers to your own questions or seeking to explain the case for intelligent design to others, *The Comprehensive Guide to Science and Faith* is an invaluable apologetic tool that will help you explore and analyze the relevant facts, research, and theories in light of biblical truth.

*How Design Emerges from Life Itself*

Zondervan Academic  
Most people, when they contemplate the living world, conclude that it is a designed

place. So it is jarring when biologists come along and say this is all wrong. What most people see as design, they say--purposeful, directed, even intelligent--is only an illusion, something cooked up in a mind that is eager to see purpose where none exists. In these days of increasingly assertive challenges to Darwinism, the question becomes acute: is our perception of design simply a mental figment, or is there something deeper at work? Physiologist Scott Turner argues eloquently and convincingly that the apparent design we see in the living world only makes sense when we add to Darwin's towering achievement the

dimension that much modern molecular biology has left on the gene-splicing floor: the dynamic interaction between living organisms and their environment. Only when we add environmental physiology to natural selection can we begin to understand the beautiful fit between the form life takes and how life works. In *The Tinkerer's Accomplice*, Scott Turner takes up the question of design as a very real problem in biology; his solution poses challenges to all sides in this critical debate.

[Monkey Girl](#) HarperOne  
A glorious, sweeping novel of desire, ambition, and the thirst for knowledge, from the # 1 New York Times bestselling author of *Eat Pray*

*Love, Big Magic, and City of Girls* In *The Signature of All Things*, Elizabeth Gilbert returns to fiction, inserting her inimitable voice into an enthralling story of love, adventure and discovery. Spanning much of the eighteenth and nineteenth centuries, the novel follows the fortunes of the extraordinary Whittaker family as led by the enterprising Henry Whittaker—a poor-born Englishman who makes a great fortune in the South American quinine trade, eventually becoming the richest man in Philadelphia. Born in 1800, Henry's brilliant daughter, Alma (who inherits both her father's money and his mind), ultimately becomes a botanist of considerable gifts

herself. As Alma's research takes her deeper into the mysteries of evolution, she falls in love with a man named Ambrose Pike who makes incomparable paintings of orchids and who draws her in the exact opposite direction—into the realm of the spiritual, the divine, and the magical. Alma is a clear-minded scientist; Ambrose a utopian artist—but what unites this unlikely couple is a desperate need to understand the workings of this world and the mechanisms behind all life. Exquisitely researched and told at a galloping pace, *The Signature of All Things* soars across the globe—from London to Peru to Philadelphia to Tahiti to Amsterdam, and

beyond. Along the way, the story is peopled with unforgettable characters: missionaries, abolitionists, adventurers, astronomers, sea captains, geniuses, and the quite mad. But most memorable of all, it is the story of Alma Whittaker, who—born in the Age of Enlightenment, but living well into the Industrial Revolution—bears witness to that extraordinary moment in human history when all the old assumptions about science, religion, commerce, and class were exploding into dangerous new ideas. Written in the bold, questing spirit of that singular time, Gilbert's wise, deep, and spellbinding tale is certain to capture the

hearts and minds of readers.

The Bridge Between Science Theology  
HarperCollins

A collection of fourteen essays which provide an overview of the argument for intelligent design, with diagrams, explanations, and relevant quotations.

A Novel Createspace  
Independent Publishing Platform

What should we teach our children about where we come from? Is evolution a lie or good science? Is it incompatible with faith? Have scientists really detected evidence of a creator in nature? From bestselling, Pulitzer Prize-winning author Edward Humes comes a dramatic story of faith, science, and courage unlike any

since the famous Scopes Monkey Trial. *Monkey Girl* takes you behind the scenes of the recent war on evolution in Dover, Pennsylvania, when the town's school board decision to confront the controversy head-on thrust its students, then the entire community, onto the front lines of America's culture wars. Told from the perspectives of all sides of the battle, it is a riveting true story about an epic court case on the teaching of "intelligent design," and what happens when science and religion collide.

**How to Regain Your Life After Being Robbed** Ignatius Press  
Earth. The Final Frontier Contrary to popular belief, Earth is not an insignificant blip

on the universe's radar. Our world proves anything but average in Guillermo Gonzalez and Jay W. Richards' *The Privileged Planet: How Our Place in the Cosmos Is Designed for Discovery*. But what exactly does Earth bring to the table? How does it prove its worth among numerous planets and constellations in the vastness of the Milky Way? In *The Privileged Planet*, you'll learn about the world's life-sustaining capabilities, water and its miraculous makeup, protection by the planetary giants, and how our planet came into existence in the first place.

*Science and Evidence for Design in the Universe* ATRI Publishing

In this book William A. Dembski brilliantly argues that intelligent design provides a crucial link between science and theology. This is a pivotal work from a thinker whom Phillip Johnson calls "one of the most important of the 'design' theorists."

**Examining the Role of Naturalism in Science** Allied Books Limited

When Charles Darwin finished *The Origin of Species*, he thought that he had explained every clue, but one. Though his theory could explain many facts, Darwin knew that there was a significant event in the history of life that his theory did not explain. During this event, the "Cambrian explosion," many animals suddenly appeared in

the fossil record without apparent ancestors in earlier layers of rock. In Darwin's Doubt, Stephen C. Meyer tells the story of the mystery surrounding this explosion of animal life—a mystery that has intensified, not only because the expected ancestors of these animals have not been found, but because scientists have learned more about what it takes to construct an animal. During the last half century, biologists have come to appreciate the central importance of biological information—stored in DNA and elsewhere in cells—to building animal forms. Expanding on the compelling case he presented in his last

book, *Signature in the Cell*, Meyer argues that the origin of this information, as well as other mysterious features of the Cambrian event, are best explained by intelligent design, rather than purely undirected evolutionary processes.

*The Tinkerer's Accomplice*  
Brazos Press

*Signature of Controversy* is a response to the 2009 bestseller *Signature in the Cell* by Stephen C. Meyer, a book recognized as establishing one of the strongest pillars underlying the argument for intelligent design. To call *Signature in the Cell* important is an understatement. The critical response that

followed the publication of Stephen Meyer's book was fascinating, but the fact is that few—if any—of the critics really grappled with the crux of Meyer's argument or with the substance of intelligent-design theory. This is remarkable and telling. In *Signature of Controversy*, defenders of intelligent design analyze the hostile response using the critics' own writings. Edited by David Klinghoffer and including essays by David Berlinski, Casey Luskin, Stephen C. Meyer, Paul Nelson, Jay Richards and Richard Sternberg.

**Why the Materialist Neo-Darwinian Conception of Nature is Almost Certainly False** Open

Road Media  
*Insatiable Rejects* is the wryly funny tale of three misfits who travel across America to defeat a gang of nefarious pornographers. Almost Caught is a website that features videos of adult movie actors engaging in clandestine sex acts performed in the presence of unaware individuals. Chip Watson, a nerdy 40-something divorcee, happens to be one of these individuals. After discovering he's been filmed unknowingly on more than one occasion, Chip becomes determined to bring the felonious organization profiting from his likeness to justice. With the help of an eccentric amateur sleuth and a beautiful young

woman, Chip and his new friends take off on a cross-country trip in the hopes of foiling the plans of the exploitative operation by destroying the Almost Caught site.

Brooklyn Based \* The  
 Boston Globe A  
 magnetic novel about  
 two families, strangers  
 to each other, who are  
 forced together on a  
 long weekend gone  
 terribly wrong. From  
 the bestselling author  
 of Rich and Pretty  
 comes a suspenseful  
 and provocative novel  
 keenly attuned to the  
 complexities of  
 parenthood, race, and  
 class. Leave the World  
 Behind explores how  
 our closest bonds are  
 reshaped—and  
 unexpected new ones  
 are forged—in  
 moments of crisis.  
 Amanda and Clay head  
 out to a remote corner  
 of Long Island  
 expecting a vacation: a  
 quiet reprieve from life  
 in New York City,  
 quality time with their  
 teenage son and  
 daughter, and a taste  
 of the good life in the

luxurious home they've rented for the week. But a late-night knock on the door breaks the spell. Ruth and G. H. are an older couple—it's their house, and they've arrived in a panic. They bring the news that a sudden blackout has swept the city. But in this rural area—with the TV and internet now down, and no cell phone service—it's hard to know what to believe. Should Amanda and Clay trust this couple—and vice versa? What happened back in New York? Is the vacation home, isolated from civilization, a truly safe place for their families? And are they safe from one other?

*Timeless Business*

*Tools Crossway*

As progress in science continues to reveal

unimagined complexities, three scientists revisit the difficult and compelling question of the origin of our universe. As mathematician, biochemist, and philosopher of science, they explore the possibility of developing a reliable method for detecting an intelligent cause and evidence for design at the origin of life. In the process, they present a strong case for opening and pursuing a fruitful exchange between science and theology. Mathematician William Dembski, author of *The Design Inference*, first argues that new developments in the information sciences make intelligent design objectively and scientifically detectable--he

identifies the signs of design. Next, philosopher of science, Stephen Meyer, and biochemist Michael Behe, author of *Darwin's Black Box*, argue that these signs are now clearly evident in both the architecture of the universe and the features of living systems. Other essays by the authors defend the scientific status of the theory of intelligent design and show how that theory supports traditional religious belief without necessarily "proving" the existence of God. In a concluding essay, Michael Behe responds to critics of his best selling book, *Darwin's Black Box*, thus bringing readers up-to-date on the status of the contemporary design argument in biology.

### How Biology Confirms Our Intuition That Life Is Designed Gateway Editions

Many prominent Christians insist that the church must yield to contemporary evolutionary theory and therefore modify traditional biblical ideas about the creation of life. They argue that God used—albeit in an undetectable way—evolutionary mechanisms to produce all forms of life. Featuring two dozen highly credentialed scientists, philosophers, and theologians from Europe and North America, this volume contests this proposal, documenting evidential, logical, and theological problems with theistic evolution—making it

the most comprehensive critique of theistic evolution yet produced.

A Compelling Case for Intelligent Design

Based on

Revolutionary

Discoveries in Science

In Signature in the Cell,

Stephen Meyer has

written the first

comprehensive DNA-

based argument for

intelligent design. As

he tells the story of

successive attempts to

unravel a mystery that

Charles Darwin did not

address—how did life

begin?—Meyer

develops the case for

this often-

misunderstood theory

using the same

scientific method that

Darwin himself

pioneered. Offering a

fresh perspective on

one of the enduring

mysteries of modern

biology, Meyer

convincingly reveals

that the argument for

intelligent design is not

based on ignorance or

"giving up on science,"

but instead on

compelling, and

mounting, scientific

evidence.

The Nature of Nature

Penguin

The first, major

scientific argument for

Intelligent Design by a

leading spokesperson

within the scientific

community, "Signature

in the Cell" proposes

the design hypothesis

as the best explanation

for the origin of the

information necessary

to produce the first life.

Signature in the Cell

Harper Collins  
Named A Best Book of  
the Year by World  
Magazine Throughout  
his distinguished and  
unconventional career,  
engineer-turned-  
molecular-biologist  
Douglas Axe has been  
asking the questions  
that much of the  
scientific community  
would rather silence.  
Now, he presents his  
conclusions in this  
brave and pioneering  
book. Axe argues that  
the key to  
understanding our  
origin is the “design  
intuition”—the innate  
belief held by all  
humans that tasks we  
would need knowledge  
to accomplish can only  
be accomplished by  
someone who has that  
knowledge. For the  
ingenious task of  
inventing life, this  
knower can only be  
God. Starting with the

hallowed halls of  
academic science, Axe  
dismantles the  
widespread belief that  
Darwin’s theory of  
evolution is  
indisputably true,  
showing instead that a  
gaping hole has been  
at its center from the  
beginning. He then  
explains in plain  
English the science  
that proves our design  
intuition scientifically  
valid. Lastly, he uses  
everyday experience to  
empower ordinary  
people to defend their  
design intuition, giving  
them the confidence  
and courage to explain  
why it has to be true  
and the vision to  
imagine what biology  
will become when  
people stand up for  
this truth. Armed with  
that confidence,  
readers will affirm what  
once seemed obvious  
to all of us—that living

creatures, from single-celled cyanobacteria to orca whales and human beings, are brilliantly conceived, utterly beyond the reach of accident. Our intuition was right all along.

The New Science About DNA That Challenges Evolution Oxford

University Press

Still Breathing: How to regain your life after being robbed. What a perfect title for this book. Joe Braxton's story is an extremely powerful and courageous masterpiece about reclaiming the will to live. Joe leaves no stone unturned: vividly taking us on a journey of pain, caused by childhood sexual abuse to a life of self-love, priority, forgiveness, and purpose. Still Breathing is a

welcomed addition to the mental health awareness arena. We need more voices like Joe's to help others. Joe tells his story in a thoughtful, intelligent, and mature manner; so that anyone can relate. This book is perfect for anyone who currently finds themselves living a life of silence or has ever lived through this pain. It is also a great reference to use to learn the warning signs to help avoid the start or continuation of sexual abuse. Joe Braxton is a social activist with a diverse background in entrepreneurship, healthcare, design, massage wellness, business management, and customer service. Born in Baltimore, MD and making a name for himself in the Metropolitan area. Joe

is a humanitarian and philanthropic scholar. Joe is a dedicated supporter of all things inspiring. He's a giver, encourager, motivator, and caring individual who possesses a heart of gold. Joe has spent many years working on the blueprint for Non-Profit "Lapels4ACause." Lapels4ACause, is an organization that supports numerous causes effecting individuals daily. Born out of his home, Joe has created some of the most beautiful lapel and flower pendants to support and raise awareness to several causes such as, HIV/Aids Awareness, Breast Cancer Awareness, Sexual Assault, Domestic Violence, Homelessness, and a host of others. Joe has received multiple

awards, have amazing magazine features, and have done a few online radio interviews pertaining to his activism and the Lapels4ACause effect. Worn by many sufferers, survivors, supporters, and celebrities, such as the world renowned make-up artist to "Oprah Winfrey"; Derrick Rutledge, celebrity A-List Photographer; Jackie Hicks, to Grammy Award Winner of #BFV; Toni Braxton, and many thanks to Philanthropist, Artist, and Host Traci Braxton. Simply put, Lapels4ACause is known for "Enhancing Your Style with Awareness." "Still Breathing," is a journey through the eyes of Joe as a young man. During his journey, you will witness his life

transformations as he struggles with the trials of regaining his life back. This book is an inspiration for all those feeling robbed of their life. It will inspire you to look deeply inside yourself, to discover your true inner peace. Follow Still Breathing on these social media outlets. Instagram @stillbreathingbook  
 Twitter @SBBookJBraxton

*A Novel* Harvard University Press  
 The origin of life from non-life remains one of the most enduring mysteries of modern science. This book investigates how close scientists are to solving that mystery and explores what we are learning about the origin of life from current research in

chemistry, physics, astrobiology, biochemistry, and more.

*Dna and the Evidence for Intelligent Design*

Harper Collins

The scientist who has been dubbed the “Father of Intelligent Design” and author of the groundbreaking book *Darwin’s Black Box* contends that recent scientific discoveries further disprove Darwinism and strengthen the case for an intelligent creator. In his controversial bestseller *Darwin’s Black Box*, biochemist Michael Behe challenged Darwin’s theory of evolution, arguing that science itself has proven that intelligent design is a better explanation for the origin of life. In *Darwin Devolves*, Behe

advances his argument, presenting new research that offers a startling reconsideration of how Darwin's mechanism works, weakening the theory's validity even more. A system of natural selection acting on random mutation, evolution can help make something look and act differently. But evolution never creates something organically. Behe contends that Darwinism actually works by a process of devolution—damaging cells in DNA in order to create something new at the lowest biological levels. This is important, he makes clear, because it shows the Darwinian process cannot explain the creation of life itself. “A process that so easily tears down

sophisticated machinery is not one which will build complex, functional systems,” he writes. In addition to disputing the methodology of Darwinism and how it conflicts with the concept of creation, Behe reveals that what makes Intelligent Design unique—and right—is that it acknowledges causation. Evolution proposes that organisms living today are descended with modification from organisms that lived in the distant past. But Intelligent Design goes a step further asking, what caused such astounding changes to take place? What is the reason or mechanism for evolution? For Behe, this is what makes Intelligent Design so important.
