### LONG SAVANAH

[A Toolbox For Revolution \(Pocket Edition\)](#) Lightning BirdThe Story of One Man's Journey Into Africa's Past

Law for Non-Law Students is written in a clear and readable style and aims to make the law understandable for readers at undergraduate or comparable level. It explains the practical influences under which the law has been formed,so that the student will be better able to understand why the law has developed in the way that it has. It gives lots of straightforward examples as to how the law works in practice and aims to equip students with the ability to appraise the effectiveness of the law in a particular circumstance rather than simply providing a list of rules for the student to regurgitate at exam time. The facts of the more important cases are given in some detail to enable the student to appreciate the range of factors which the court may have taken into account in reaching its decision. The new edition has been updated to take account of all recent developments, both in relation to statute and to case law. Certain chapters, particularly in the area of sale of goods, have been substantially rewritten and expanded in an attempt to give more detail, while at the same time remaining student-friendly. New chapters on Agency and Negligence have been added. brThis new edition should be suitable for most courses which have a law element.

[Principles of Geology](#) Princeton Architectural Press

As a child in South Africa, spending summers exploring the wild with his boyhood friends, Lyll Watson came face to face with his first elephant. From that moment on, Watson's fascination grew into a lifelong obsession with understanding the nature and behaviour of this impressive creature. Around the world, the elephant - at once a symbol of spiritual power and physical endurance - has been worshipped as a god and hunted for sport. In this captivating portrait of the elephant, Watson draws from scientific research, anthropological studies, and personal experience to document the animal's wide-ranging capabilities to remember and to mourn; and he reminds us of its rich mythic origins, its evolution, and its devastation in recent history. Part meditation on an elusive animal, part evocation of the power of place, Elephants presents an alluring mix of the mysteries of nature and the wonders of childhood.

*Law for Non-Law Students* W. W. Norton & Company

Wind is everywhere and nowhere. Wind is the circulatory system of the earth, and its nervous system, too. Energy and information flow through it. It brings warmth and water, enriches and strips away the soil, aerates the globe. Wind shapes the lives of animals, humans among them. Trade follows the path of the wind, as empire also does. Wind made the difference in wars between the Greeks and Persians, the Mongols and the Japanese. Wind helped to destroy the Spanish Armada. And wind is no less determining of our inner lives: the föhn, mistral, sirocco, Santa Ana, and other “ill winds” of the world are correlated with disease, suicide, and even murder. Heaven’s Breath is an encyclopedic and enchanting book that opens dazzling new perspectives on history, nature, and humanity.

**Julia** Harper Collins

Montana is a large state with diverse vegetation from Great Plains prairie and deciduous forest in the east to northern coniferous forest and alpine tundra in the west. Discovering the botanical secrets of this spectacular landscape began with indigenous peoples and continued through the 20th Century with early explorers, geographers and entrepreneurs followed by teachers, scientists and curious and dedicated lay persons. Montana's multitude of rugged mountains and wide open spaces means that botanical discoveries which started with the Lewis and Clark Expedition continue to this day. Montana's Pioneer Botanists brings together more than thirty biographies of these diverse people and traces the growth of botanical knowledge in this wild and beautiful state.

Includes over 200 photos and illustrations and seventeen different authors, all botanists themselves.

**Conscious Evolution** iUniverse

Girl meets boy. It's a story as old as time. But what happens when an old story meets a brand new set of circumstances? Ali Smith's remix of Ovid's most joyful metamorphosis is a story about the kind of fluidity that can't be bottled and sold. It is about girls and boys, girls and girls, love and transformation, a story of puns and doubles, reversals and revelations. Funny and fresh, poetic and political, here is a tale of change for the modern world.

**Souls in the Sea** Anchor

In a house in London a woman starts a new life, trying to put tragedy behind her. Then a pretty blonde child runs into view, bringing with her an inexplicable suggestion of evil. Once Julia Lofting had a husband and a daughter. But everything has changed since she bolted from her marriage, in flight from the unbearable truth of her daughter's death. For Julia, there is no escape. Another child awaits, another mother suffers, and a circle of the damned gathers around her. The haunting has begun . . .

**Personal and Social Transformation in Our Time** Dell

Photographs and text explore the meaning, relevance, and significance of inanimate, ordinary objects that hold special value to the one who appreciates their unique and irreplaceable qualities.

**Tracking the Elephant** Inner Traditions

This book presents the life stories of three women of the German-speaking realm whose lives inspired the author directly: mathematician Maria Weber Steinberg (1919-2013); journalist Irmgard Rexroth-Kern (1907-1983); and Viennese art historian Fr. Dr. Anna von Spitzmüller (1903-2001). The lives of these three women serve as emotional mirrors to the cultural transformations and tumultuous history of the 20th century. Their stories tell of the hardships, struggles, and victories of intellectual European women in this era. Each woman was related to men who played a prominent role in European cultural life, men who received some recognition in history books. As intellectual professionals, these women, in contrast, received very few public accolades for their important achievements. Placing them in the cultural context of the times in Germany and Austria, the book highlights the traumatic choices imposed on ordinary people by political and social circumstances over which they had no control. Along with the women's individual stories, the chapters focus on overarching themes, including educated women's roles in European society, narratives of perseverance in confronting Nazism, and specific historical background describing the incidents affecting their life trajectories.

Narrates how a lone Englishman survived unarmed in the African jungle and was instructed in the secrets of a witch doctor

[Lightning Bird](#) E P Dutton

There is one powerful smell closely associated with the making of coffee in bedsitters. It is the smell of burning plastic, and will go away if you move the handle of the pot away from the flame. Legendary journalist Katharine Whitehorn's classic handbook of quick, simple meals - including Swedish Sausage Casserole, Lamb Tomato Quickie and Shrimp Wiggle - became the essential survival manual for the busy single person living in their first rented room. Whitehorn's trademark intelligent, practical and fabulously funny writing shines as brightly as ever, addressing the problems of 'cooking at ground level, in a hurry, with nowhere to put the salad but the washing-up bowl, which is in any case full of socks'. Delightful, entertaining and utterly indispensable. Praise for Katharine Whitehorn: 'A meteor: clever, funny, compassionate, insightful, beautiful' RACHEL COOKE 'Everyone grabbed the Observer to read her column on a Sunday morning' JILLY COOPER 'Wise, witty, mischievous' JAY RAYNER

*Jacobson's Organ: And the Remarkable Nature of Smell* Anvil Publishing, Inc.

Nothing is more memorable than a smell. So why do we persist in dismissing the nose as a blunt instrument? Smell is our most seductive and provocative sense, invading every domain of our lives. We can identify our relatives, detect the availability of a potential mate, sniff out danger, and distinguish between good and bad food just with our noses. In this surprising and delightful book, Lyll Watson rescues our most unappreciated sense from obscurity. He brings to light new evidence concerning Jacobson's Organ: an anatomical feature discovered high in the nose in 1811 and dismissed for centuries as a vestigial ghost. Yet recent research has shown Jacobson's Organ to be an incredibly influential pheromonal mechanism that feeds the area of the brain affecting our awareness, emotional states, and sexual behavior. Following the seven classes of smell devised by the pioneering botanist Carolus Linnaeus in his *Odores Medicamentorum*, Watson examines the roles of smell and pheromones in humans, plants, and animals. He reveals the curious ways in which trees communicate their distress, the olfactory abilities of feral children, the bond we have with our offspring, the psychosexual effects of perfume, and the link between smell and memory formation. Jacobson's Organ unlocks the door to the strange world of this mysterious sense.

*How Washington, Jefferson, and Franklin Revolutionized American Cuisine* Sourcebooks, Inc.

Watson explores the subtle forces of memory fields and suggests that matter has the capacity to absorb emotional “fingerprints,” the mental fossils that channel echoes from the past. He demonstrates the complexity of inanimate life and offers possible proof of our sensitivity to its minute, natural patterns of energy.

[The Secret Life of Inanimate Objects](#) New York Review of Books

Science no longer holds absolute truths. Between nature and the supernatural is the host of happenings the author describes as supernature.

**The Googlization of Everything** Prometheus Books

A cutting-edge examination of feelings, not thoughts, as the gateway to understanding consciousness • Contends that emotion is the greatest influence on personality development • Offers a new perspective on immunity, stress, and psychosomatic conditions • Explains how emotion is key to understanding out-of-body experience, apparitions, and other anomalous perceptions Contemporary science holds that the brain rules the body and generates all our feelings and perceptions. Michael Jawer and Dr. Marc Micozzi disagree. They contend that it is our feelings that underlie our conscious selves and determine what we think and how we conduct our lives. The less consciousness we have of our emotional being, the more physical disturbances we are likely to have—from ailments such as migraines, fibromyalgia, chronic fatigue, and post-traumatic stress to anomalous perceptions such as apparitions and involuntary out-of-body experiences. Using the latest scientific research on immunity, sensation, stress, cognition, and emotional expression, the authors demonstrate that the way we process our feelings provides a key to who is most likely to experience these phenomena and why. They explain that emotion is a portal into the world of extraordinary perception, and they provide the studies that validate the science behind telepathic dreams, poltergeists, and ESP. The *Spiritual Anatomy of Emotion* challenges the prevailing belief that the brain must necessarily rule the body. Far from being by-products of neurochemistry, the authors show that emotions are the key vehicle by which we can understand ourselves and our interactions with the world around us as well as our most intriguing—and perennially baffling—experiences.

[75 Objects with Unexpected Significance](#) Cavendish Publishing

Shakespeare wrote that a rose by any other name would smell as sweet. But if you cannot smell, does the rose lose its sweetness? The first and definitive book on the psychology of smell, *The Scent of Desire* traces the importance of smell in our lives, from nourishment to procreation to our relationships with the people closest to us and the world at large. Smell was the very first sense to evolve and is located in the same part of the brain that processes emotion, memory, and motivation. To our ancestors, the sense of smell wasn't just important, it was crucial to existence and it remains so today. Our emotional, physical, even sexual lives are profoundly shaped by both our reactions to and interpretations of different smells. Why do some people like a certain smell and others hate it? Is smell personal or cultural? How does smell affect our choices and our daily lives? Rachel Herz explores these questions and examines the role smell plays in our lives, and how this most essential of senses is imperative to our physical and emotional well-being. Herz investigates how our sense of smell functions, examines what purpose it serves, and shows how inextricably it is linked to our survival. She introduces us to people who have lost their ability to smell and shows how their experiences confirm this sense's importance by illuminating the traumatic effect its loss has on the quality of day-to-day living. Herz illustrates how profoundly scent and the sense of smell affect our daily lives with numerous examples and personal accounts based on her years of research. The wonders of our sense of smell are all explored in a compelling and engaging manner, from emotions and memory to aromatherapy and pheromones. For anyone who has ever wondered about human nature or been curious about the secrets of both the body and the mind, *The Scent of Desire* is a fascinating, down-to-earth tour of the psychology and biology of our most neglected sense, the sense of smell.

**What is Consciousness?** Canongate Books

Here is the human potential masterwork that defined the New Age. Called "an exciting vision of the future" (*Cleveland Plain Dealer*), "a handbook of the New Age" (*USA Today*), and "a new charter of human possibility" (*Norman Cousins*) upon its initial publication in 1980, *The Aquarian Conspiracy* is

a breathtaking, compelling study of the changes in work, relationships, medicine, religion, education, and more that comprised the birth of the New Age movement. An influence on thinkers from Deepak Chopra to Al Gore, *The Aquarian Conspiracy* remains a thorough, detailed classic of contemporary thought—an impeccable document that traces one of the most powerful cultural movements of our age.

*The Woman's Novel 1914-1939* William Morrow & Company

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

*Lifetime* Univ of California Press

*A very great profession*, first published in 1983, looks at women like Katherine in Virginia Woolf's *Night and Day* ('Katharine, thus, was a member of a very great profession which has, as yet, no title

and very little recognition... She lived at home') and Laura, the heroine of *Brief Encounter*, women whose lives and habits were wonderfully recorded in the fiction of the time. Drawing on the novels to illuminate themes such as domestic life, romantic love, sex, psychoanalysis, the Great War and 'surplus' women, *A Very Great Profession* uses the work of numerous women writers to present a portrait, through their fiction, of middle-class Englishwomen in the period between the wars.

**How Feelings Link the Brain, the Body, and the Sixth Sense** Penguin Random House South Africa

To celebrate having reached their one hundredth volume, here is Persephone's marvelous collection of short stories by women. They are very well chosen: some are by first-rank authors, including Katherine Mansfield, Edith Wharton, Dorothy Parker, Irène Némirovsky and Penelope Fitzgerald; others from well-known writers who have been championed by the imprint and deservedly gained fresh recognition, such as Dorothy Whipple and Mollie Panter-Downes. There are 30 stories in all, and all remarkably unhampered by their time. The first, Susan Glaspell's story of love and lexicography from 1909, seems as bold as the last, by Georgina Hammick (from 1986), though you might not have found such an unflinching description of a gynaecological procedure 103 years ago. Put-upon mothers, exasperated wives, discarded mistresses - shared tropes bind these disparate stories into a coherent whole. A stand-out is Norah Hoult's 1938 story of a wife whose husband is grateful for the money her gentleman friend pays her for sex.
