Boron-based compounds have been utilized as ligands within transition metal complexes for many decades. The diversity of such compounds in terms of varying functional groups is truly exceptional. Boron compounds are of

high interest due to the great potential to modify the substituents around the boron center and to produce a broad range of structural motifs. The many different ways these compounds can coordinate or interact with transition metal centers is astonishing. Examples of transition metal complexes containing boron-based ligands include scorpionates, cluster-type borane- and carboranes, borates, and phosphine-stabilized borylene ligands. This Special Issue brings together a collection of articles focusing on recent developments in the aforementioned boron-based ligands. The articles reported in this book will provide the reader with an overview of the types of boron-based ligands which are currently being researched in groups around the world.

Production ergonomics - the science and practice of designing industrial workplaces to optimize human well-being and system performance - is a complex challenge for a designer. Humans are a valuable and flexible resource in any system of creation, and as long as they stay healthy, alert and motivated, they perform well and also become more competent over time, which increases their value as a

resource. However, if a system designer is not mindful or aware of the many threats to health and system performance that may emerge, the end result may include inefficiency, productivity losses, low working morale, injuries and sick-leave. To help budding system designers and production engineers tackle these design challenges holistically, this book offers a multi-faceted orientation in the prerequisites for healthy and effective human work. We will cover physical, cognitive and organizational aspects of ergonomics, and provide both the individual human perspective and that of groups and populations, ending up with a look at global challenges that require workplaces to become more socially and economically sustainable. This book is written to give you a warm welcome to the subject, and to provide a solid foundation for improving industrial workplaces to attract and retain healthy and productive staff in the long run.

The topic of this book is known as dynamic scheduling, and is used to refer to three dimensions of project management and scheduling: the construction of a baseline schedule and the analysis of a project schedule's risk as preparation of the project control phase during project progress. This dynamic scheduling point of view implicitly assumes that the usability of a project's baseline schedule is rather limited and only acts as a point of reference in the project life cycle. Consequently, a project schedule should especially be considered as nothing more than a predictive model that can be used for resource efficiency calculations, time and cost risk analyses, project tracking and performance

measurement, and so on. In this book, the three dimensions of dynamic scheduling are highlighted in detail and are based on and inspired by a combination of academic research studies at Ghent University ([www.ugent.be](http://www.ugent.be)), in-company trainings at Vlerick Business School ([www.vlerick.com](http://www.vlerick.com)) and consultancy projects at OR-AS ([www.or-as.be](http://www.or-as.be)). First, the construction of a project baseline schedule is a central theme throughout the various chapters of the book, and is discussed from a complexity point of view with and without the presence of project resources. Second, the creation of an awareness of the weak parts in a baseline schedule is discussed at the end of the two baseline scheduling parts as schedule risk analysis techniques that can be applied on top of the baseline schedule. Third, the baseline schedule and its risk analyses can be used as guidelines during the project control step where actual deviations can be corrected within the margins of the project's time and cost reserves. The second edition of this book has seen corrections, additions and amendments in detail throughout the book. Moreover Chapter 15 on "Dynamic Scheduling with ProTrack" has been completely rewritten and extended with a section on "ProTrack as a research tool".

Our responses to our thermal environment have a considerable effect on our performance and behavior, not least in the realm of work. There has been considerable scientific investigation of these responses and formal methods have been developed for environmental evaluation and design. In recent years these have been developed to the extent that detailed national and international standards of practice have now become feasible. This new edition of Ken Parson's definitive text brings us back up to date. He covers hot, moderate and cold environments, and defines these in terms of six basic parameters: air temperature, radiate temperature, humidity, air velocity, clothing worn, and the person's activity. There is a focus on the principles and practice of human response, which incorporates psychology, physiology and environmental physics with applied ergonomics. Water requirements, computer modeling and computer-aided design are brought in, as are current standards. Special populations, such as the aged or disabled and specialist environments such as those found in vehicles are also considered. This book continues to be the standard text for the design of environments for humans to live and work safely, comfortably and effectively, and for the design of materials which help the same people cope with their environments.

**Real Essentialism** MDPI

Real Essentialism presents a comprehensive defence of neo-Aristotelian essentialism. Do objects have essences? Must they be the kinds of things they are in spite of the changes they undergo? Can we know what things are really like – can we define and classify reality? Many if not most philosophers doubt this, influenced by centuries of empiricism, and by the anti-essentialism of Wittgenstein, Quine, Popper, and other thinkers. Real Essentialism reinvigorates the tradition of realist, essentialist metaphysics, defending the reality and knowability of essence, the possibility of objective, immutable definition, and its relevance to contemporary scientific and metaphysical issues such as whether essence transcends physics and chemistry, the essence of life, the nature of biological species, and the nature of the person.

This is the first truly international collaboration drawing attention to the problems of democratic consolidation across the Southern regions of the world.

Nine case studies--three each from Africa, Latin America, and Asia--shed light on the contemporary challenges faced by democratizing nations, mostly from the perspective of emerging theorists working in their home countries. "In this valuable new book, scholars from the regions concerned explain the theory and practice of democracy away from the familiar Western world. As such, the book will be useful to students and scholars of comparative as much as international politics for presenting voices from the South about the challenges of consolidating democracy in developing countries."--Ramesh Thakur, director, Balsillie School of International Affairs  
"The authors provide us with insightful and critical analyses of the strengths and weaknesses of democracies in Latin America, Africa, and Asia. They show that there are neither Northern, nor Southern, nor African, Latin American, nor Asian 'models' of democracy, ready to be replicated elsewhere."--Albrecht Schnabel, senior fellow, Geneva Centre for the Democratic Control of Armed Forces

*Textiles for Cold Weather Apparel* CABI An important consideration for energy-efficient buildings is their primary energy requirements over the entire life cycle. How to determine this? What integrative factors influence the performance of a healthy and sustainable building? This, while it may be important for clients and architects to know, is frequently not very transparent. This book has been written to assist with clarifying target criteria and expanding horizons when it comes to ecological buildings. It is meant as a handbook and source of reference for clients, architects, planners and building operators, to provide them with pertinent information about their design, construction and operation: how to do this in the most energy-efficient and economical manner? Also, there is feedback and documentation about prominent buildings like the Hamburg Dockland or the Landesbank Baden-Wuerttemberg in Stuttgart. They provide excellent architectural examples for detailed construction and design solutions. Further, there are insightful interviews with architects and clients about many important buildings, which help turn this book into an integrated source of reference for sustainable architecture. - A Guideline for Planning, Construction and Operation of sustainable Buildings - A source of reference for clients, architects, planners

and building operators - Innovative architectural examples with sustainable concepts and design

In this historical volume Salvatore Califano traces the developments of ideas and theories in physical and theoretical chemistry throughout the 20th century. This seldom-told narrative provides details of topics from thermodynamics to atomic structure, radioactivity and quantum chemistry. Califano's expertise as a physical chemist allows him to judge the historical developments from the point of view of modern chemistry. This detailed and unique historical narrative is fascinating for chemists working in the fields of physical chemistry and is also a useful resource for science historians who will enjoy access to material not previously dealt with in a coherent way.

Tourism has the potential to contribute to world peace, and through appropriate management, to address current realities such as globalization, migration, conflicts, prejudices and poverty. This book discusses the interrelation between peace, conflict resolution and tourism, the role of industry, and the role of the individual.

Guidelines for Consideration of Bats in Lighting Projects

The African National Congress is light years beyond the liberation movement of old. It remains a juggernaut, but its control and dominance are no longer watertight. The ANC lives the contradictions of weaknesses, cracks and factions while retaining its colossal status. As a party-movement it draws on its liberation credentials, and extracts immense power from its deep anchorage in South Africa's people. It is immersed in electoral politics that marks the state

of its overwhelming power cyclically. As government the ANC is the object of protest, but not protest designed to bring the ruling party to its knees. The ANC is in command of the state, yet fails to definitively counter the deficits that make South Africa's democracy seem so diluted. Its incredulous and thus far trusting supporters condemn but only rarely punish deployees who do not 'pass through the eye of the needle'. The ANC and the Regeneration of Political Power unpacks these contradictions. It focuses on four faces of the ANC's political power - the organisation, the people, political parties and elections, and policy and government - and explores how the ANC has acted since 1994 to continuously regenerate its power. By 2011-12 the power configurations around the ANC were converging to a conjuncture holding vexing uncertainties. This book presents insights into how South African politics -

in many ways synonymous with the politics of the ANC - is likely to unfold in years and possibly decades to come. Specification for Slewng Jib Cranes  
This book is about enhancing the contribution of business to sustainable development in sub-Saharan Africa, with an emphasis on both challenges and opportunities. Sub-Saharan Africa is the only region in the world where the proportion of extremely poor people increased during the final decades of the previous century. The overarching imperative to support Africa's poor in their quest for better livelihoods, human rights and environmental integrity, is a huge challenge, and the business community has an important role to play. The purpose of this book is to contribute to a better understanding of this role and its implications for decision-makers in business, as well as, to some extent, government and civil society.--
