This book discusses 120 types of natural, small-molecule drugs derived from plants. They are

grouped into 7 parts according their clinical uses, such as drugs for cardiovascular diseases, for metabolic diseases, for neuropsychiatric diseases, for immune-mediated inflammatory diseases, anti-tumor drugs, and drugs for parasites and bacterial infection. Each chapter systematically summarizes one drug, including its physicochemical properties, sources, pharmacological effects and clinical applications. To help readers understand the drug

better, the research and pharmacological activity for each drug is also described, which serves as a salutary lesson for future drug development. Written by frontline researchers, teachers and clinicians working in field of pharmacy and pharmacology it provides an overview of natural, small-molecule drugs derived from plants for researchers in the field. *Chemistry, Pharmacology and Clinical Evidence* MDPI
After the successful introduction of

acupuncture to the West, recent advances in analytical methods in chemistry, molecular biology and systems biology – especially the development of the “omic” technologies – have again brought Chinese drugs into the focus of research on Traditional Chinese Medicine (TCM). With more than 1000 publications on the chemistry, molecular biology and pharmacology of TCM drugs in international journals over the last 10 years, Chinese

drugs are gaining increasingly reputation and impact. These data offer great opportunities for the development of new pharmaceuticals for various clinical applications. International scientists have compiled relevant and trend setting research results in this book. Topics range from the latest methods of quality and safety assurance by chemical and genetic fingerprints to the development of new pharmaceuticals for a future evidence-based therapy e.g. for cancer,

cardiovascular, inflammatory or infectious diseases as well as to recent experimental results on multitarget and synergy research for the preparation of multi-extract-pharmaceuticals from TCM.

Sterols and other

isoprenoids are of great interest for their molecular structure and function in cell architecture and evolution, as well as for their importance in medicine and agriculture. Molecules' 2019 Festschrift Special Issue in honor of the 65th birthday of Prof. W. David Nes, an internationally recognized chemical biologist and recipient of the George Schroepfer medal for sterol research, focuses on recent developments in the chemistry, biosynthesis, and function

of these polycyclic natural products. This volume of Molecules contains 16 leading-edge review articles and original research contributions from an international cast of scientists. This volume is grouped into three sections: (i) isoprenoid metabolome and diversity, (ii) clinical evaluation of sterol and triterpene structures and biosynthesis, and (iii) methods and synthesis of steroids and other compounds. The volume will be a valuable reference tool for those

who study medicinal chemistry, protein chemistry, and biochemistry of isoprenoid lipids.

This work presents up-to-date information on chemical, pharmacological, clinical studies and historical uses of common dietary Chinese herbs. Authored by native experts in the

field, the reader is introduced to each herb with a brief chronological review of Chinese literature on dietary herb uses, with chapters dedicated to each selected herb including color photos for each herb. In addition, Chinese characters as well as the Latin botanical name indices, and chemical structures for the known active compounds are also provided. The clear layout examines the health benefits that have been studied for centuries, including

current clinical and toxicological data. A wide range of Traditional Chinese Medicine (TCM) herbs are investigated for their suitability into daily diets for maintaining general wellness or disease prevention. In the past decades, natural health products, dietary supplements, functional foods, or nutraceuticals have emerged in the West due to the increasing demand for non-pharmaceutical healthcare products. Traditional Chinese Medicine disease

prevention and treatment incorporates the use of foods, and herbal medicine in an integrated manner, and thus the dietary Chinese herbs in used in TCM for thousands of years could be sources for developing new, effective, and safe ingredients to capture the rapidly expanding opportunity in the global market place.

The genus *Phyllanthus*

has over 1,000 species distributed worldwide, many of which have been used indigenously for the treatment of a variety of ailments for generations. Researchers have developed ways to analyze the potential of these plants and demonstrated the pharmacological action and various chemical entities present in each of them. They have validated the folklore claims and used this knowledge to design cost-effective and reliable sources of medicine. The

first book to exclusively examine the genus *Phyllanthus*, *Phyllanthus Species: Scientific Evaluation and Medicinal Applications* begins with a systematic classification and identification manual for various plants in the genus, followed by the scientific evaluation of the species for modern medicinal use. This reference compiles cutting edge research from countries around the world, including the UK, Malaysia, India, Indonesia, Spain, Cuba, and China. Topics covered include

phylogenetic analysis of *Phyllanthus*, chemistry of the genus, anti-cancer, anti-diabetic and chemoprotective effects, genotoxicity, clinical trials involving *Phyllanthus*, and various formulations containing different plants from the genus *Phyllanthus*. *Phyllanthus Species: Scientific Evaluation and Medicinal Applications* describes in detail the taxonomy, cultivation, and marketing, identification of geographic and genetic hot spots, chemistry, scientific evaluation, and

clinical trials of various species of *Phyllanthus*. Written for researchers and educators in academia, industry, agriculture, and the interested general public, this book's up-to-date references make it a powerful resource providing first-hand information on *Phyllanthus*.

practice guidelines on traditional medicine.
New Century Traditional Chinese Medicine BoD – Books on Demand
 "Today the chemical analysis is the dominant direction of the quality control system of TCM and natural medicines. But it is difficult to measure the quality for TCM herbs by detecting solely the presence / absence of a single or small number of marker components at very low concentration, especially for the herbs derived from mutliorigins and produced

from wide localities, as well as those with unknown principle bioactive components. From this standpoint, it is necessary to use multidisciplinary technologies, integrating the morphological authentication and chemical analysis, qualitative detection and quantitative determination, and physic-chemical analysis and bioassay, in order to distinguish the authentic herb from the adulterant, the superior from the inferior, and to improve

the standards of TCM herbs. This book includes 60 commonly used TCM herbs, each involving the following items: definition, location, action and indication, description, microscopic identification, TLC identification, HPLC/GC fingerprint identification (optional), assay, discussion and references. It is a valuable reference of quality evaluation for TCM herbs."--

 This unique book delves

into the mysteries of human fetal growth and maturation. Growing knowledge in genetics indicates that factors that impact on/influence fetal growth and maturation may have a role in determining a person's health and disease in later years. Placental, maternal, environmental, nutrient as well as fetal genome factors each play a role in producing a healthy, unhealthy or abnormal baby. A study of fetal growth and maturation is therefore basic to the

understanding of why fetal growth problems occur, what implications these can have for adult disease, and how clinical intervention can help to reverse growth problems. The present study will be comprehensive and will be a major contribution to the fields of gynecology, genetics, obstetrics, biochemistry, molecular biology and clinical medicine. It will include cutting edge research in the field as well as explorations on clinical interventions in fetal growth, which will not

only add to existing knowledge but also prompt future research. The two Editors are distinguished in their fields and both have extensive clinical and research experience. They felt that they could use their expertise to create a book that will help students, practitioners, researchers and others to understand the subject of gestation, growth and maturation and its implications from a multi-dimensional point of view, which will help them develop their own

expertise in a cutting-edge and developing field. They have brought together medical scientists, clinical practitioners, embryologists, endocrinologists, immunologists, gynecologists, obstetricians, reproductive and molecular biologists, geneticists and many others to create a state-of-the-art book on a subject with increasing demand for further knowledge. It aims to integrate different disciplines to give a

holistic view of human fetal growth maturation. *Human Fetal Growth and Development* World Health Organization Updated annually, the BP is the official, authoritative collection of standards for UK medicinal substances for human and veterinary use.
